1. Purpose

Artificial Intelligence (AI) is transforming education, research, public administration, business, healthcare, and nearly every aspect of modern society. As an organization dedicated to digital transformation, innovation, education, research, and community development, the Association for Digital Progress ADP - CODEX recognizes both the tremendous opportunities and the significant responsibilities associated with the development and use of AI technologies.

This Responsible Artificial Intelligence (AI) Policy establishes the principles and standards that guide the ethical, lawful, transparent, and human-centered use of AI within ADP.

The purpose of this Policy is to:

- promote responsible and trustworthy AI;
- protect fundamental human rights and freedoms;
- ensure meaningful human oversight over AI-assisted decisions;
- reduce risks associated with AI systems;
- encourage innovation while maintaining ethical standards;
- promote transparency and accountability;
- protect privacy and personal data;
- foster public trust in AI technologies;
- support compliance with applicable legislation and internationally recognized AI governance principles.

ADP believes that Artificial Intelligence should enhance human capabilities rather than replace human responsibility.

Human judgment, ethical reasoning, and professional accountability shall always remain central to decisions affecting individuals and communities.

2. Scope

This Policy applies to all individuals acting on behalf of ADP whenever Artificial Intelligence systems are used in organizational activities.

The Policy applies to:

- Board members;
- employees;
- volunteers;

- interns;
- consultants;
- researchers;
- trainers;
- software developers;
- project staff;
- contractors;
- external experts;
- partner organizations where required by agreement.

The Policy applies to AI systems used in:

- education;
- research;
- software development;
- digital services;
- project management;
- data analysis;
- communication;
- translation;
- document preparation;
- public information;
- decision support;
- innovation projects;
- mobile applications;
- web platforms.

The Policy applies regardless of whether AI systems are:

- developed internally;
- acquired commercially;
- accessed through cloud services;
- open-source;
- experimental;
- integrated into third-party software.

All organizational users of AI are expected to comply with this Policy.

3. Definitions

For the purposes of this Policy, the following definitions apply.

Artificial Intelligence (AI)

Artificial Intelligence refers to machine-based systems capable of performing tasks that typically require human intelligence, including learning, reasoning, prediction, pattern recognition, language generation, and decision support.

Generative AI

AI systems capable of producing new text, images, audio, software code, video, or other content based on user prompts or input data.

Human Oversight

Meaningful human review, supervision, intervention, and accountability throughout the lifecycle of AI-assisted activities.

High-Risk AI

AI systems that may significantly affect individuals' rights, safety, education, employment, healthcare, public services, or other important societal interests.

AI Output

Any recommendation, prediction, analysis, text, image, software code, translation, or other material produced by an AI system.

AI Hallucination

Information generated by AI that appears plausible but is factually incorrect, misleading, fabricated, or unsupported by reliable evidence.

Bias

Systematic unfairness resulting in unequal or discriminatory outcomes for particular individuals or groups.

Explainability

The ability to understand, communicate, and appropriately interpret how AI-generated outputs or recommendations were produced.

4. Policy Statement

ADP supports the responsible use of Artificial Intelligence as a tool for innovation, education, research, digital transformation, and sustainable development.

The Association recognizes that AI should be developed and used in ways that:

- respect human dignity;
- protect fundamental rights;
- promote inclusion;
- strengthen democratic values;
- increase access to knowledge;
- improve public services;
- support sustainable development.

The Association adopts a human-centered approach to Artificial Intelligence.

AI shall support—not replace—human judgment in decisions affecting individuals or communities.

ADP shall not knowingly develop, deploy, or promote AI applications that:

- violate human rights;
- enable unlawful discrimination;
- facilitate mass surveillance contrary to applicable law;
- intentionally spread misinformation;
- encourage violence or hatred;
- undermine democratic institutions;
- compromise personal privacy;
- create unacceptable risks to individuals or society.

All AI activities conducted by ADP shall be guided by ethical responsibility, transparency, accountability, and continuous human oversight.

5. Guiding Principles for Responsible AI

The following principles guide every AI-related activity undertaken by ADP.

5.1 Human-Centered AI

Artificial Intelligence shall always serve human well-being and societal benefit.

Human dignity, autonomy, and rights shall remain the primary consideration in every AI-related activity.

5.2 Beneficial Innovation

ADP supports innovation that improves education, research, accessibility, public services, environmental sustainability, and digital inclusion.

Innovation should create measurable public value while minimizing foreseeable risks.

5.3 Accountability

Human beings—not AI systems—remain responsible for decisions made within the Association.

Responsibility cannot be delegated to algorithms.

5.4 Transparency

Whenever AI significantly contributes to the creation of content, recommendations, or decisions, appropriate transparency should be maintained.

Users should understand when AI has materially assisted organizational work.

5.5 Fairness

AI systems should be designed, selected, and used in ways that reduce discrimination and promote equal treatment.

The Association shall seek to identify and mitigate algorithmic bias whenever reasonably possible.

5.6 Privacy

AI systems shall respect privacy and comply with applicable data protection requirements.

Only the minimum necessary personal information should be processed.

5.7 Security

Appropriate technical and organizational measures shall be implemented to reduce cybersecurity and AI-related risks.

5.8 Sustainability

AI should contribute to environmentally and socially sustainable development whenever reasonably possible.

The Association encourages responsible and efficient use of computational resources.

6. Human Oversight and Accountability

Artificial Intelligence is intended to support, not replace, human expertise, judgment, and responsibility.

ADP recognizes that AI systems may improve efficiency, enhance creativity, and assist decision-making; however, ultimate responsibility for organizational actions always remains with human decision-makers.

Meaningful human oversight shall be maintained throughout the lifecycle of AI-assisted activities, including planning, implementation, review, and evaluation.

Accordingly, individuals acting on behalf of ADP shall:

- critically evaluate AI-generated outputs before use;
- verify important facts using reliable sources where appropriate;
- exercise independent professional judgment;
- avoid relying solely on AI when making significant decisions;
- intervene whenever AI-generated recommendations appear inaccurate, biased, or inappropriate;
- document significant human review where necessary.

AI systems shall not be granted autonomous authority to make final decisions concerning:

- employment;
- volunteer recruitment;
- disciplinary measures;
- procurement awards;
- grant allocations;
- scholarship selection;
- safeguarding decisions;
- legal opinions;
- financial approvals;
- strategic organizational decisions.

The Association recognizes that accountability cannot be delegated to technology.

Every organizational decision remains the responsibility of the individual or governing body approving that decision.

7. Transparency and Explainability

Transparency promotes trust, accountability, and informed decision-making.

Whenever AI significantly contributes to organizational work, reasonable transparency should be maintained regarding the role AI played in producing the final result.

Where appropriate, ADP should:

- disclose that AI has materially assisted content creation;
- distinguish between AI-generated and human-generated work when relevant;
- explain important AI-supported decisions in understandable language;
- maintain documentation of AI-assisted processes where appropriate;
- communicate limitations of AI-generated outputs.

The Association recognizes that some AI systems operate as complex statistical models whose internal reasoning may not always be fully interpretable.

In such circumstances, decisions affecting individuals shall never rely solely upon outputs that cannot be adequately understood or reviewed by responsible human decision-makers.

Transparency also requires acknowledging uncertainty.

Where AI-generated information cannot be independently verified, this uncertainty should be clearly communicated rather than concealed.

8. Fairness, Inclusion and Non-Discrimination

ADP is committed to ensuring that AI technologies contribute to equality, inclusion, accessibility, and social justice.

The Association recognizes that AI systems may unintentionally reproduce or amplify historical, cultural, linguistic, demographic, or societal biases contained within training data.

Accordingly, reasonable efforts shall be made to identify and mitigate potential bias.

Individuals using AI should:

- critically review outputs for unfair or discriminatory content;
- consider cultural and linguistic diversity;
- avoid reinforcing stereotypes;
- evaluate whether AI recommendations disproportionately disadvantage particular groups;
- seek multiple perspectives where appropriate.

AI shall never be intentionally used to discriminate on the basis of:

- age;

- sex;
- gender identity;
- disability;
- ethnicity;
- race;
- religion;
- nationality;
- language;
- political opinion;
- socioeconomic status;
- sexual orientation;
- any other protected characteristic.

The Association encourages the development and use of AI applications that improve accessibility for persons with disabilities and reduce barriers to participation in education, employment, and public life.

9. Privacy and Data Protection

Responsible AI requires responsible handling of information.

ADP is committed to protecting personal data throughout every stage of AI-assisted activities.

Whenever AI systems process personal information, users shall comply with:

- applicable national legislation;
- the General Data Protection Regulation (GDPR), where applicable;
- donor requirements;
- organizational data protection policies.

Users shall:

- process only the minimum personal data necessary;
- avoid entering sensitive personal information into AI systems unless authorized and appropriately protected;
- anonymize or pseudonymize data whenever practical;
- verify whether external AI providers retain submitted information;
- ensure appropriate security measures are in place.

Sensitive personal information—including health records, financial information, biometric data, identification numbers, safeguarding records, and confidential organizational information—shall not be uploaded to public AI services unless appropriate legal and contractual safeguards exist.

Privacy considerations shall be integrated into AI-related projects from the earliest stages of planning.

10. AI Safety, Security and Reliability

The Association recognizes that AI systems may produce inaccurate, incomplete, outdated, misleading, or fabricated information.

AI outputs shall therefore be treated as advisory rather than authoritative unless independently verified.

Users should:

- verify factual claims before publication;
- validate numerical calculations where appropriate;
- review citations and references;
- examine software code before deployment;
- confirm legal information through qualified professionals;
- verify medical or technical information using authoritative sources.

The Association shall seek to reduce AI-related risks by:

- selecting trustworthy AI providers where possible;
- monitoring known limitations of AI systems;
- maintaining cybersecurity practices;
- protecting organizational information assets;
- updating AI practices as technologies evolve.

The Association encourages responsible experimentation with emerging AI technologies while maintaining appropriate safeguards.

11. Responsible Use of Generative AI

Generative AI has become an important tool for education, research, communication, software development, and administrative work.

ADP supports the responsible use of generative AI technologies provided that human oversight remains central throughout the process.

Generative AI may appropriately assist activities such as:

- drafting documents;
- language translation;
- brainstorming ideas;
- preparing educational materials;
- software development;
- coding assistance;
- summarizing information;
- preparing presentations;
- data visualization;
- research support.

Users shall ensure that AI-generated material is:

- reviewed by a competent human;
- verified for factual accuracy where appropriate;
- edited to reflect organizational standards;
- free from discriminatory or harmful content;
- respectful of intellectual property rights.

Generative AI shall not be used to:

- impersonate individuals;
- produce deceptive content;
- intentionally spread misinformation;
- fabricate research findings;
- create fraudulent documentation;
- generate harmful software;
- bypass ethical review processes.

Human creativity, expertise, and responsibility remain essential even when AI substantially contributes to the production of content.

12. AI in Research and Education

As an organization promoting education, research, innovation, and digital transformation, ADP encourages the responsible integration of AI into learning and scientific activities.

AI may support:

- literature reviews;
- research planning;
- educational content development;
- language improvement;
- statistical analysis;
- programming assistance;
- accessibility;
- personalized learning;
- administrative efficiency.

Researchers, educators, and trainers shall ensure that AI-assisted work maintains academic integrity.

Accordingly:

- AI shall not be presented as an independent author;
- research findings shall never be fabricated;
- sources should be appropriately acknowledged;
- significant AI assistance should be disclosed whenever required by publishers, donors, or project rules;
- independent scholarly judgment shall always remain central.

Educational programmes should also promote AI literacy, helping participants understand both the opportunities and limitations of Artificial Intelligence.

The Association encourages critical thinking rather than unquestioning acceptance of AI-generated information.

13. Intellectual Property and Copyright

Artificial Intelligence systems may generate text, images, software code, audio, video, designs, analyses, translations, and other creative outputs. While these technologies provide significant opportunities for innovation and productivity, they also introduce complex legal and ethical issues relating to intellectual property (IP) and copyright.

ADP is committed to respecting the intellectual property rights of authors, creators, developers, researchers, organizations, and other rights holders.

Individuals acting on behalf of the Association shall:

- comply with applicable copyright, trademark, patent, database, and licensing laws;
- respect software licenses and open-source licensing conditions;
- avoid reproducing protected content without appropriate authorization or legal basis;

- acknowledge original sources where appropriate;
- ensure that AI-assisted work does not intentionally infringe the intellectual property rights of others.

AI-generated content shall not be assumed to be free of copyright restrictions.

Users should recognize that AI outputs may:

- resemble existing copyrighted works;
- contain inaccurate attribution;
- reproduce protected material unintentionally;
- include content derived from training data in ways that require careful legal and ethical consideration.

Before publishing AI-generated materials of significant importance, users should consider whether additional legal review is appropriate.

The Association also recognizes the importance of protecting its own intellectual property.

Where AI contributes to the development of organizational publications, software, educational materials, databases, research outputs, or digital services, appropriate documentation should be maintained regarding human contributions and organizational ownership.

14. Procurement and Third-Party AI Systems

The selection and use of third-party Artificial Intelligence systems should be based upon careful evaluation of quality, security, legal compliance, reliability, and ethical considerations.

Before adopting an AI platform or service for organizational use, reasonable consideration should be given to factors including:

- functionality;
- security;
- privacy protections;
- transparency;
- vendor reputation;
- contractual terms;
- data retention practices;
- interoperability;
- accessibility;
- regulatory compliance.

Whenever practical, procurement decisions should also consider:

- availability of human oversight mechanisms;
- explainability of outputs;
- mechanisms for correcting errors;
- cybersecurity controls;
- support and maintenance arrangements;
- responsible AI commitments published by the provider.

The Association should avoid procuring AI systems that:

- intentionally facilitate unlawful activities;
- promote discrimination;
- encourage misinformation;
- create unacceptable cybersecurity risks;
- fail to provide reasonable safeguards for personal information.

Contracts involving AI technologies should clearly define responsibilities relating to:

- data protection;
- intellectual property;
- confidentiality;
- cybersecurity;
- maintenance;
- accountability;
- compliance with applicable legislation.

15. Risk Assessment and Impact Evaluation

Responsible AI requires continuous assessment of potential risks before, during, and after implementation.

ADP shall seek to identify foreseeable risks associated with AI systems and implement proportionate mitigation measures.

Risk assessments should consider, where appropriate:

- potential effects on human rights;
- privacy implications;
- discrimination and bias;
- cybersecurity risks;

- misinformation;
- reliability;
- environmental impact;
- accessibility;
- reputational risks;
- legal compliance.

For AI systems that significantly influence organizational decisions or public-facing services, additional impact evaluations may be appropriate.

Impact assessments should consider:

- intended purpose;
- expected benefits;
- possible unintended consequences;
- affected stakeholders;
- available safeguards;
- human oversight mechanisms;
- opportunities for improvement.

Risk management is an ongoing process rather than a one-time activity.

The Association shall periodically review AI-related risks as technologies, regulations, and organizational activities evolve.

16. Reporting AI Concerns

ADP encourages a culture in which concerns regarding Artificial Intelligence may be raised openly, responsibly, and without fear of retaliation.

Individuals are encouraged to report concerns whenever they reasonably believe that an AI system has:

- produced inaccurate information;
- generated discriminatory outcomes;
- violated privacy;
- created security risks;
- produced misleading content;
- malfunctioned in a way that could affect organizational decisions;
- been used contrary to this Policy;

- created unacceptable ethical concerns.

Reports may be submitted through organizational reporting mechanisms.

Individuals reporting concerns in good faith shall be treated respectfully and shall not be subjected to retaliation solely because they raised legitimate concerns.

Reports should include, where possible:

- the AI system involved;
- the nature of the concern;
- relevant dates;
- supporting evidence;
- potential impact;
- actions already taken.

The Association shall review reported concerns objectively and implement corrective measures whenever appropriate.

Lessons learned from reported concerns should contribute to improving future AI governance.

17. Roles and Responsibilities

Responsible Artificial Intelligence requires clearly defined organizational responsibilities.

Every individual using AI within ADP shares responsibility for ensuring ethical, lawful, transparent, and accountable AI practices.

17.1 Board of Directors

The Board of Directors shall:

- approve this Policy;
 - provide strategic oversight of AI governance;
 - ensure that AI supports the Association's mission and values;
 - periodically review AI-related organizational risks;
 - promote responsible innovation.
-

17.2 President and Senior Leadership

The President and senior leadership shall:

- promote ethical AI throughout the organization;
- ensure implementation of this Policy;

- support responsible innovation;
- allocate resources for AI governance where appropriate;
- encourage responsible experimentation while managing risks.

Leadership should foster an organizational culture that values critical thinking, transparency, accountability, and continuous learning.

17.3 Employees, Volunteers and Project Staff

Individuals using AI shall:

- understand this Policy;
- exercise professional judgment;
- review AI-generated outputs;
- protect confidential information;
- comply with applicable legislation;
- report AI-related concerns;
- participate in relevant AI training.

Users remain personally responsible for the work they approve, publish, or submit, regardless of whether AI assisted in its preparation.

17.4 Researchers and Educators

Researchers, trainers, educators, and academic contributors shall:

- maintain academic integrity;
- ensure research transparency;
- avoid fabrication of results;
- disclose AI assistance where appropriate;
- encourage responsible AI literacy among learners.

The Association encourages educators to teach both the capabilities and limitations of Artificial Intelligence.

17.5 Software Developers and Technical Teams

Individuals developing or deploying AI-enabled software on behalf of ADP should:

- implement security by design;
- consider privacy by design principles;

- document system functionality;
 - test systems before deployment;
 - monitor system performance;
 - address identified vulnerabilities promptly;
 - support explainability where reasonably achievable.
-

17.6 All Members of the Association

Every member of ADP contributes to building an organizational culture in which Artificial Intelligence is used responsibly, ethically, and for the public benefit.

The Association encourages curiosity, innovation, openness, and critical reflection while maintaining respect for human dignity, democratic values, and the rule of law.

18. Training and AI Literacy

Artificial Intelligence technologies are evolving rapidly. Responsible AI governance therefore requires continuous learning, critical thinking, and the development of AI literacy across the Association.

ADP is committed to fostering an organizational culture in which individuals understand both the opportunities and the limitations of Artificial Intelligence.

The Association shall, where appropriate:

- provide introductory AI awareness training for new employees, volunteers, and project personnel;
- organize periodic workshops on responsible AI practices;
- promote understanding of AI ethics, transparency, and accountability;
- encourage awareness of algorithmic bias and fairness;
- provide guidance on the safe use of Generative AI tools;
- support the development of prompt engineering and critical evaluation skills;
- raise awareness regarding privacy, cybersecurity, and intellectual property considerations;
- encourage lifelong learning in emerging digital technologies.

Training should be proportionate to organizational roles and responsibilities.

Individuals with responsibilities involving AI system development, procurement, research, data analysis, software engineering, or strategic decision-making may receive additional specialized training.

The Association also encourages members to share knowledge, lessons learned, and examples of good practice to strengthen organizational AI maturity.

AI literacy should not only focus on technical competence but also on ethical reasoning, responsible decision-making, and respect for human rights.

19. Monitoring and Continuous Improvement

Responsible AI governance requires ongoing evaluation rather than one-time implementation.

ADP shall periodically assess the effectiveness of this Policy and continuously improve its AI governance practices.

Monitoring activities may include:

- reviewing AI-related projects;
- evaluating AI risks;
- assessing compliance with this Policy;
- reviewing reported AI incidents;
- monitoring technological developments;
- evaluating stakeholder feedback;
- assessing organizational AI maturity;
- reviewing external legal and regulatory developments.

The Association should periodically examine whether AI systems continue to:

- serve organizational objectives;
- operate reliably;
- protect fundamental rights;
- remain consistent with ethical principles;
- comply with applicable legal requirements.

Lessons learned from audits, evaluations, research, project implementation, or reported incidents should contribute to future policy improvements.

Continuous improvement reflects the Association's commitment to responsible innovation rather than simple regulatory compliance.

20. Violations

Failure to comply with this Policy may expose individuals, beneficiaries, partners, donors, and the Association itself to significant legal, ethical, operational, financial, and reputational risks.

Violations may include, but are not limited to:

- intentional misuse of AI systems;
- unauthorized disclosure of confidential information through AI platforms;

- submission of AI-generated work as entirely human-created where disclosure is required;
- fabrication of research findings;
- manipulation of AI outputs to deceive others;
- discriminatory or harmful use of AI;
- intentional generation or dissemination of misinformation;
- creation or distribution of deceptive synthetic media (including deepfakes);
- failure to maintain required human oversight;
- repeated disregard for this Policy.

Depending upon the seriousness of the violation, organizational responses may include:

- guidance or corrective coaching;
- additional training;
- verbal or written warning;
- temporary suspension of AI-related responsibilities;
- reassignment of duties;
- suspension from projects;
- termination of employment, volunteer engagement, or contractual relationship where applicable;
- removal from elected or appointed positions in accordance with the Statute;
- referral to competent authorities where required by law.

Disciplinary measures shall always be applied fairly, proportionately, consistently, and in accordance with applicable legislation and organizational procedures.

21. Policy Review

Artificial Intelligence is among the fastest evolving areas of technology, regulation, and public policy.

Accordingly, this Policy shall be reviewed periodically to ensure that it remains effective, relevant, and aligned with international best practices.

As a general principle, the Policy should be reviewed at least once every **two years**, or earlier whenever significant developments occur, including:

- changes in applicable legislation or regulations;
- adoption of new international AI standards;
- publication of updated donor requirements;
- emergence of significant new AI technologies;

- major organizational restructuring;
- lessons learned from AI incidents or risk assessments.

Recommendations for revisions may be submitted by:

- the Board of Directors;
- the President;
- employees;
- volunteers;
- project managers;
- researchers;
- technical specialists;
- external advisors;
- partner organizations where appropriate.

All amendments shall be approved in accordance with the Association's governance procedures.

The most recent version of the Policy shall be made available to all relevant stakeholders.

22. Final Provisions

This Responsible Artificial Intelligence (AI) Policy was adopted by the Association for Digital Progress ADP - CODEX to promote the ethical, transparent, accountable, and human-centered development and use of Artificial Intelligence.

The Policy shall enter into force on the date of its approval by the competent governing body of the Association.

Compliance with this Policy is mandatory for all individuals acting on behalf of ADP whenever Artificial Intelligence systems are used in organizational activities.

Nothing in this Policy shall limit obligations established by:

- applicable national legislation;
- international human rights law;
- data protection legislation;
- intellectual property law;
- donor requirements;
- contractual obligations.

Where legal or contractual requirements establish higher standards than those contained in this Policy, the higher standard shall prevail.

The Board of Directors shall oversee implementation of this Policy and promote a culture of responsible AI throughout the Association.

By adopting this Policy, ADP reaffirms its commitment to:

- protecting human dignity and fundamental rights;
- ensuring meaningful human oversight;
- promoting transparency and accountability;
- encouraging ethical innovation;
- protecting privacy and cybersecurity;
- advancing fairness, accessibility, and inclusion;
- supporting responsible digital transformation;
- contributing to sustainable development through trustworthy Artificial Intelligence.

The Association believes that Artificial Intelligence should empower people, strengthen democratic values, expand educational opportunities, accelerate responsible innovation, and contribute to the public good.

Technology should always remain accountable to humanity, and not the other way around.

Appendix A – Responsible Artificial Intelligence Commitment

Declaration of Commitment to Responsible Artificial Intelligence

I acknowledge that I have received, read, and understood the Association for Digital Progress ADP - CODEX Responsible Artificial Intelligence (AI) Policy.

I understand that the responsible use of Artificial Intelligence is a shared responsibility and that I am expected to comply with the principles and standards established by this Policy in all activities undertaken on behalf of the Association.

I commit to:

- use AI ethically, lawfully, and responsibly;
- maintain meaningful human oversight over AI-assisted work;
- protect privacy and confidential information;
- respect intellectual property rights;
- critically evaluate AI-generated outputs before use;
- report AI-related concerns in good faith;
- promote transparency, accountability, fairness, and inclusion in the use of Artificial Intelligence;
- contribute to the continuous improvement of responsible AI governance within ADP.

I understand that failure to comply with this Policy may result in appropriate organizational, contractual, or legal consequences.
